

MOTOR ENGINEERING

Steven Farrant - Vaughan Motors

Steven is working on MITO (Motor Industry Training Organisation) Unit Standards while working at Vaughan Motors for one day every week. He is experiencing first hand what it is like to be an apprentice in the motor industry, while completing his NCEA Level 3 at school.

The MITO Gateway Programme includes units on workplace safety, workshop equipment, general engineering, service checks on vehicles, removing & replacing parts on a motor vehicle and much more. Once he has completed the Gateway Programme he can prove to a future employer that he is suitable for an apprenticeship and has a head start with the skills and knowledge required for the first level of his apprenticeship.
